

5 STEPS TOWARDS GDPR COMPLIANCY IN PRACTICE

Pekka Vepsäläinen
Tikkasec Ltd

Speaker Background

- Pekka Vepsäläinen – Tikkasec Ltd
- Information Security part of my job since 2001 (Nokia smartphone projects)
- Privacy became a matter of interest when working as Global Head of Competence Development at Teleca (2010-2012)
- Cyber Security studies at Jyväskylä University (2012-2014)
- Cyber Security Development Manager at Jykes Ltd (2012-2017)
- Entrepreneur since 2017 – Cyber Security and GDPR consulting & coaching

Contents

Some background & basics about GDPR

5 Steps Towards GDPR Compliancy in Practice

1. Board room awareness & privacy task force
2. Data inventory – where is all the personal data?
3. Risk assessment – what are the TOP risks to manage?
4. Executing GDPR action plan – from data security to data requests
5. Preparing required documents & contracts

The background is a dark blue gradient with a pattern of semi-transparent padlocks. There are four padlocks visible: two on the left are blue and open, one in the center is red and closed, and one on the right is blue and open. The entire background is overlaid with a pattern of light blue hexagonal codes, similar to a digital or cryptographic theme.

History of privacy regulation in Finland / EU

GDPR Objectives

Towards a Digital
Single Market

Creating a unified
approach to data
protection across
the EU

Stronger
mandate for
authorities

More obligations
to data
controllers

Giving individuals
full control over all
their personal data

The background of the slide features a dark blue gradient with several padlocks in various shades of blue and red. Overlaid on this are numerous strings of hexadecimal code (e.g., C3AC4A21BE, 294A3B, 4192B53D) in a light blue, semi-transparent font, creating a digital and security-themed aesthetic.

SOME KEY FACTS ABOUT GDPR

GDPR widens the definition of Personal Information

PII (USA) vs. Personal Data (EU)??

- **NIST:** PII is distinguishing individual identity
- **European Commission:** Personal data is “**any information that relates** to an identified or identifiable living individual”
- So in this case Personal Data = PII + any other information related to such a person

Personnel ID:
Emp123456

B.Sc. Of Engineering, 2002

Work history

Teleca, 5/2001-8/2012

Jykes, 4/2014-4/2017

3/1-3/10, Sick leave

6/15-7/15, Vacation

8/18-8/19, Sick leave

9/10-9/11, Sick leave

Data Controller vs. Data Processor

- Data Controller - determines the **purposes and means** of the processing of personal data
- Data Processor - processes personal data on behalf of the controller

Clarify your role – sometimes it's data controller, sometimes data processor even within the same application!

- E.g. Facebook is a data controller for private users but in some cases data processor for your company's followers' data

Basic principles for the processing of personal data

1. Personal data shall be:

- a) Processed **lawfully, fairly** and in a **transparent manner**
- b) Collected for **specified, explicit** and **legitimate purposes**
- c) **Adequate, relevant** and **limited** to what is necessary
- d) **Accurate** and, where necessary, **up to date**
- e) Identification of data subjects for **no longer than is necessary**
- f) Processed in a manner that **ensures appropriate security** of the personal data

2. The controller shall be responsible for, and be **able to demonstrate** compliance with, paragraph 1 -> "**accountability**"

(GDPR Article 5)

Lawfulness of data processing

1. Data subject has **given consent** to the processing
2. For the **performance of a contract**
3. For **compliance with a legal obligations**
4. To **protect the vital interests** of the data
5. Carried out in the **public interest** or in the exercise of **official authority**
6. For the purposes of the **legitimate interests** pursued by the controller or third party

Some key rights of the data subjects

- **Transparency** of data processing – privacy notices
- **Information** and **access** to personal data
- Right to erasure – '**right to be forgotten**'
- Right to **object** marketing and **profiling**

Data breach notifications

- Data breach notification window is only **72 hours**
 - Clock starts ticking when the data breach has been detected
- You have to be able to detect & then react real fast
- It's not only about Cyber Attacks – human errors & bugs are counted too!

Do you have your processes in place and have you practiced them?

Some myths about GDPR

- Consent is always needed from data subjects – not true
- Data is always needed to delete after request from data subject – not true
- Right to data portability is always applied – not true

The background of the slide features a dark blue gradient with several padlocks in various shades of blue and red. Overlaid on this are numerous strings of hexadecimal code (e.g., C3AC4A21BE, 294A3B, 4192B53D) in a light blue, semi-transparent font, creating a digital or cybersecurity theme.

1. BOARD ROOM AWARENESS & PRIVACY TASK FORCE

Some challenges & risks

- Huge fines if things go wrong
 - “Under Germany’s old data protection law, Google would be fined a maximum of 300,000 Euros. However, GDPR would fine a company up to **4 percent of its annual global turnover.**” – *interestinengineering.com* (October 2018)
- But it’s not only about the fines – **your company’s reputation is at stake**
- Are there some other risks?
 - Blackmailing by Cyber Attackers: “Pay me or I’ll report to authorities”
 - “Be Prepared – The German DPAs will start random GDPR audits” – *globalcompliancenews.com* (October 2018)

Commitment of Board Room

- Any company that works with information relating to EU citizens will have to comply with the requirements of the GDPR
 - If GDPR is not yet on your board room's agenda, do it now
- But this can be a competitive advantage too!
- What is your **strategy towards GDPR?**
 - Some U.S. Companies have selected NOT to offer services to EU citizens anymore
 - OR you may take it seriously and grow your business within the EU

Set up Privacy Task Force

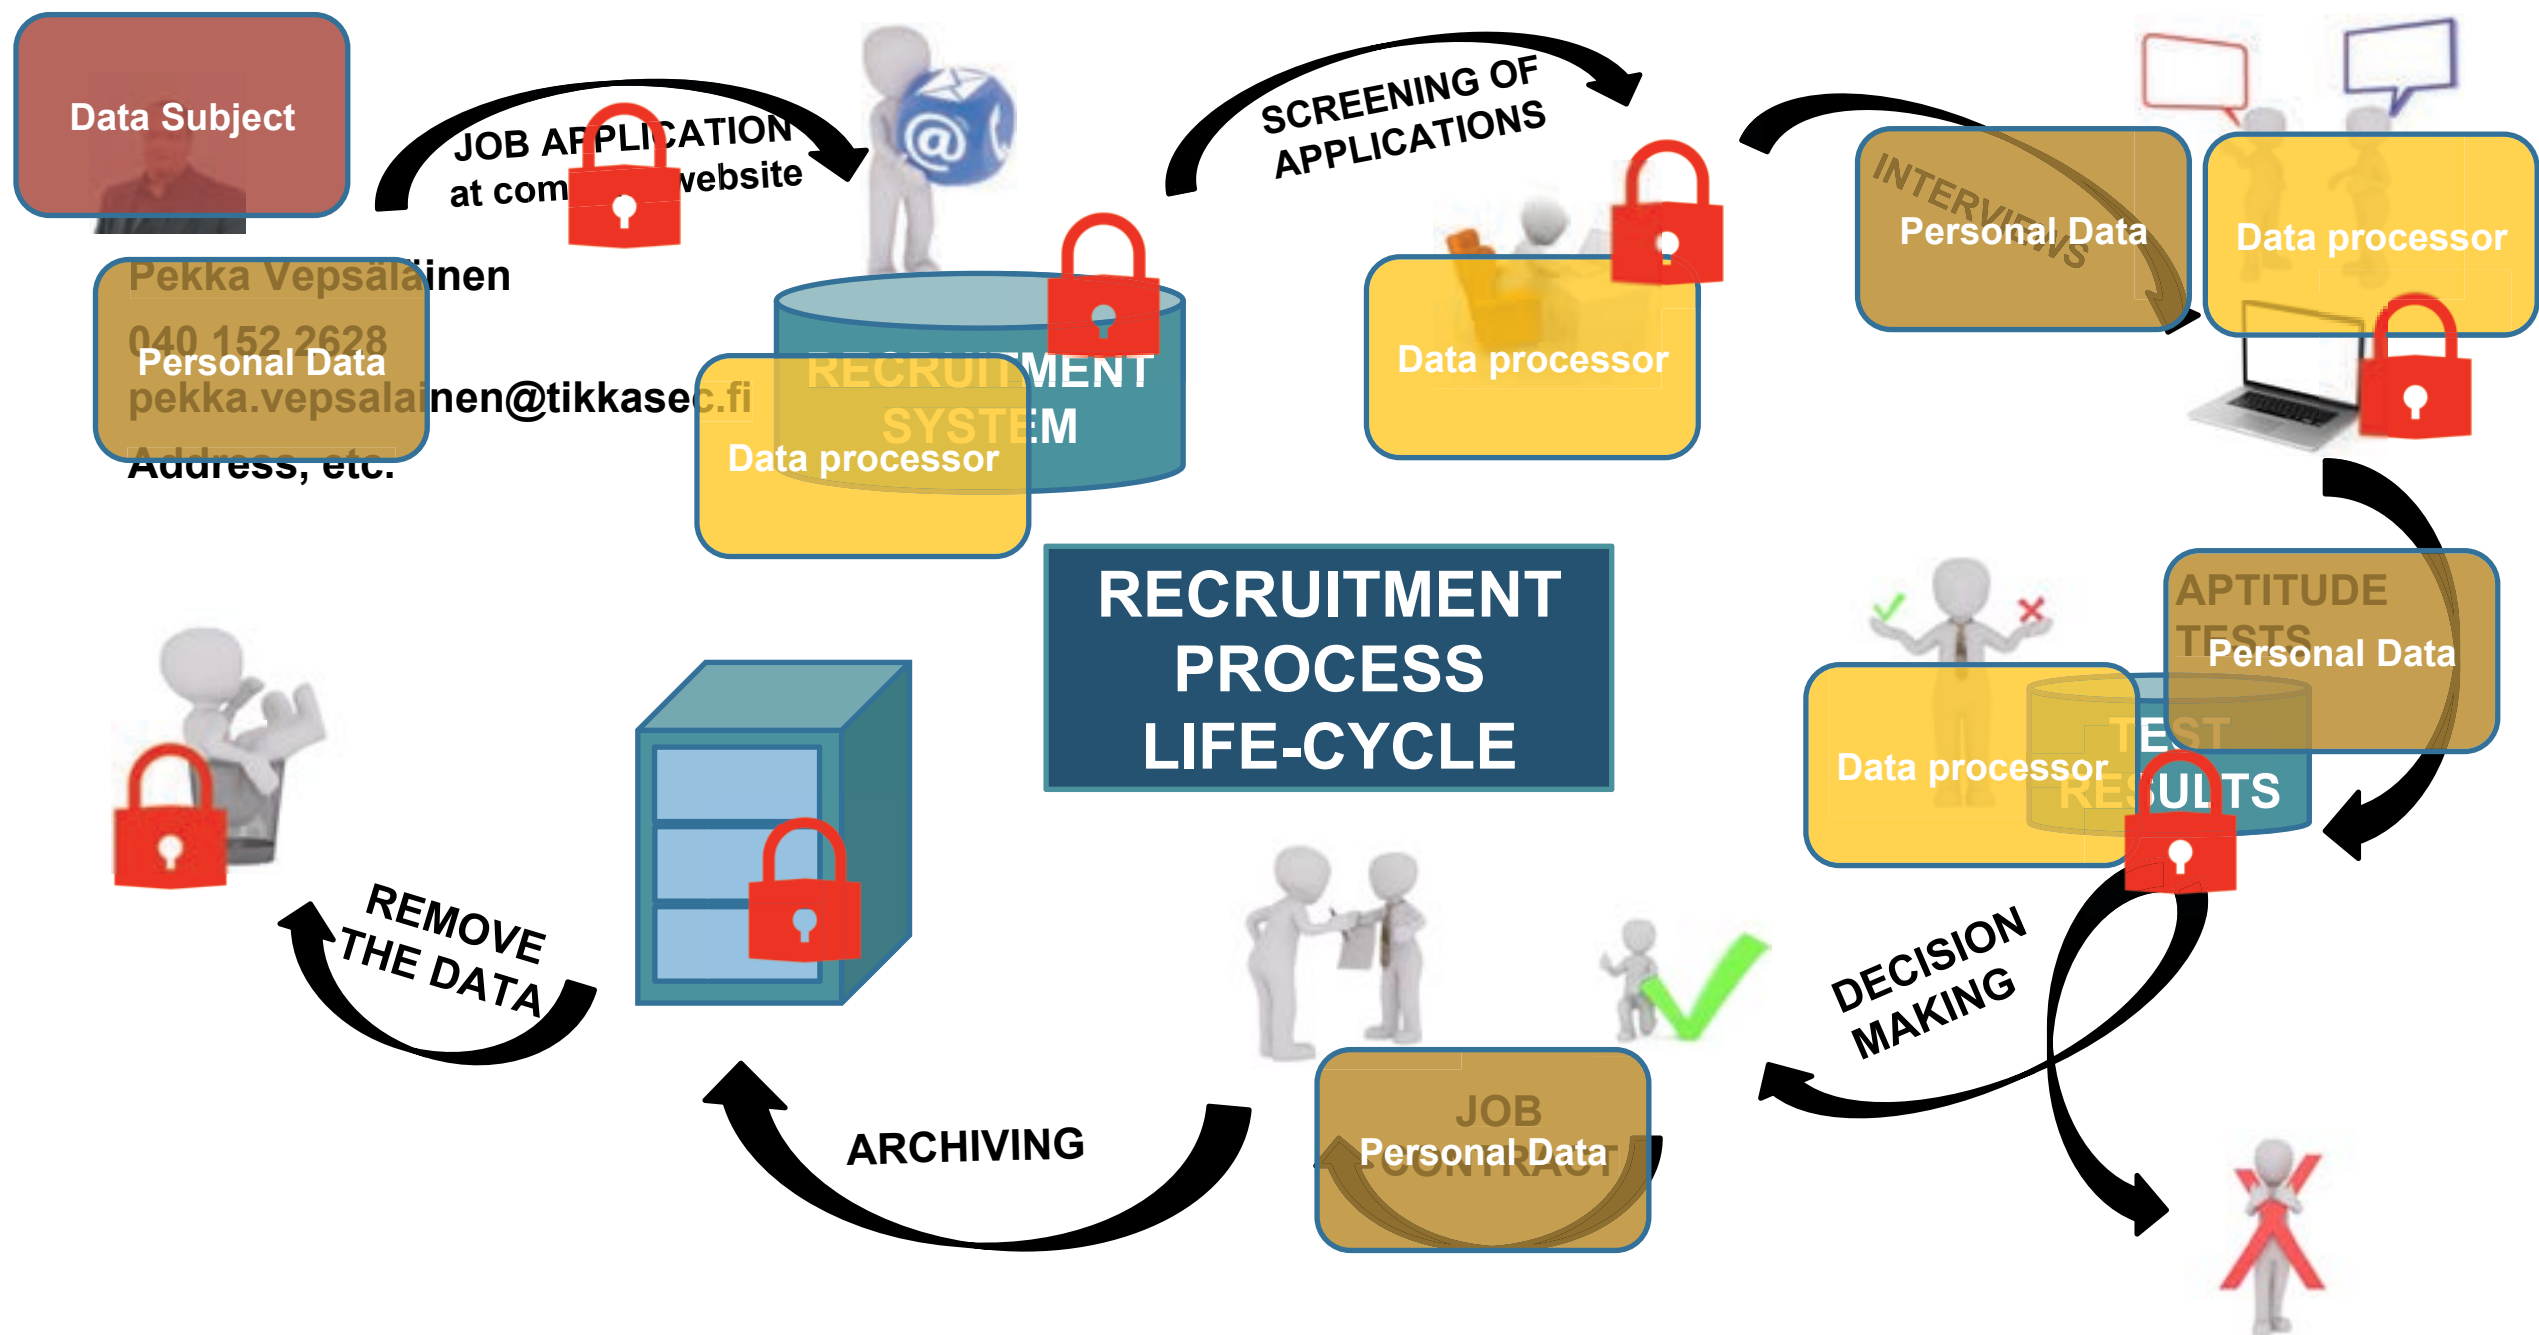

- It's not just an IT issue, it's **a cultural change**
 - Get your personnel committed to the change – include them in the project
- Set up a **privacy task force**:
 1. DPO to lead the task force
 2. Include relevant business directors – they define the purposes of data processing!
 3. Include people at the grassroots level – they know how the data is processed in practice!
 4. Include your contract lawyers – you need to work on the contracts too

The background of the slide features a dark blue gradient with several padlocks in various shades of blue and red. Overlaid on this are numerous strings of hexadecimal code (e.g., C3AC4A21BE, 294A3B, 4192B53D) in a light blue, semi-transparent font, creating a digital or cybersecurity theme.

2. DATA INVENTORY – WHERE IS ALL THE PERSONAL DATA?

Data inventory

- What and how personal data is processed? In which filing/information systems?
- Who has access to the data in different phases of **personal data life cycle** – from data capture to archiving and removal? How long do you store the data?
- Roles of internal and external parties: data controller vs. data processor + subcontractors
- Identify special categories of personal data processed
- How are data subjects' rights and other GDPR requirements implemented in different data processing activities?

The background of the slide features a dark blue gradient with several padlocks in various shades of blue and red. Overlaid on this are numerous strings of hexadecimal code (e.g., C3AC4A21BE, 294A3B, 4192B53D) in a light blue, semi-transparent font, creating a digital or cybersecurity theme.

3. RISK ASSESSMENT – WHAT ARE THE TOP RISKS TO MANAGE?

GDPR Risk Assessment

- DPIA (Data Protection Impact Analysis)
 - Must be done for high risk data processing activities
- Risk assessment workshop
 - To identify pitfalls of data processing, especially when processing special categories of personal data or larger amounts of data
 - Internal and external threats, both technical and organizational
 - Information systems, data processors, subcontractors
- Depending on what kind of personal data is processed, you need to take different actions
 - Example: B2B contact information vs. employee health information

Data Protection is a Risk Management activity

- Data protection should be implemented based on identified risks!
 - Put effort & money where it's really needed
 - GDPR also recognizes the costs of implementation + you can't have 100% security

RISK ASSESSMENT

- **Identify the risks** that may have impact to personal data protection
- **Analyze the risks:** determine the likelihood and consequence of each risk
- **Evaluate or rank the risks:** Risk magnitude is combination of likelihood and consequence. Make decisions about whether the risk is acceptable or whether it needs treatment activities.
- **Treat the risks.** Create a plan to treat or modify these risks to achieve acceptable risk levels.
- **Monitor, track and review the risks on regular basis.**

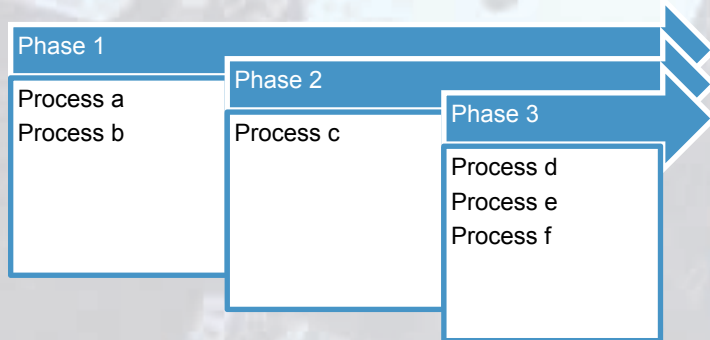

The background of the slide features a dark blue gradient with several padlocks in various shades of blue and red. Overlaid on this are numerous strings of hexadecimal code (e.g., C3AC4A21BE, 294A3B, 92B53D) in a light blue, semi-transparent font, creating a digital security theme.

4. EXECUTING GDPR ACTION PLAN – FROM DATA SECURITY TO DATA REQUESTS

Cyber Security for Personal Data

- Cyber Security development based on Risk mitigation plans
- Cyber Security is implemented in

- IT systems
- Processes
- Communication

Prepare for Requests from Data Subjects

- Data subjects have many rights for their personal data – and they may use these rights
- You need to have processes & tools in place to respond to these requests
- Identifying the data subject
 - When is it enough to rely on just an email address, and when should you use stronger authentication methods?

Training of your organization

- Prepare your organization for GDPR – educate your people
- Everyone needs to understand their own role in your privacy framework
- Your organization is as strong as its weakest link

The background of the slide features a dark blue gradient with several padlocks in various shades of blue and red. Overlaid on this are numerous strings of hexadecimal code (e.g., C3AC4A21BE, 294A3B, 4192B53D) in a lighter blue font, creating a digital security theme.

5. PREPARING REQUIRED DOCUMENTS & CONTRACTS

Some mandatory documentation

- Informing the data subjects → **Privacy notices**
- Risk assessments – **Risk mitigation plans**
- Records of requests from data subjects
- Records of processing activities – article 30
- Documented instructions for data processors
- Other documentation as part of Accountability
 - E.g. Process descriptions of data processing in different functions

Contracts

- **DPAs (Data Processing Agreements)** must be in place in the whole supply chain of data processing
 - Data Controller vs. Data Processor – clarify the roles!
 - NDAs with data processors
 - Documented instructions
 - Other terms based on article 28 – Processor, and article 32 – Security of processing
- **The whole supply chain must be covered**
 - You are responsible of your subcontractors too!
 - This includes cloud & information system vendors with access to the personal data

The background of the slide features a dark blue gradient with several padlocks of varying sizes and colors (light blue, dark blue, and reddish-brown) scattered across it. Overlaid on the padlocks and background are numerous hexadecimal strings (hex codes) in a light blue, semi-transparent font, creating a digital or cybersecurity theme.

SUMMARY

Practical Changes in Everyday Life

- Rights of Data Subjects
- Risk assessment as an ongoing process
- Data Breach notifications
- Lots of documentation, legal work, contracts, ...
- Continuous development
- It's not only about IT – it's about people
- **Accountability of GDPR compliancy**
- You shouldn't worry about huge fines, but **focus on customer trust** instead
 - What's the impact to your company's **reputation**?
